Wright State University
School of Professional Psychology (SOPP)
Intervention Competency Exam
Site Authorization to Use De-Identified Clinical Case

The SOPP requires students to present a clinical case from a practicum site for their intervention competency examination. Students are required to highlight one client encounter that features their clinical work for examination. A video or an audio recording of the client encounter is preferable, but SOPP permits use of a typed transcript when video/audio recording capability is not available at the site or is declined by the client.

The purpose of this form is to ensure that the SOPP student has obtained and documented the requisite permission of the client to use a de-identified version of the encounter for the Intervention Competency Exam (ICE). By using this form, the client’s identity remains protected and is not disclosed for the competency exam.

By signing the authorization form below, the SOPP student’s practicum supervisor confirms that the required client permissions have been obtained by the student.
